

**MyNursingLab** provides a guided learning path that is proven to help students synthesize vast amounts of information, guiding them from memorization to true understanding through application.

## Kozier's Fundamentals of Canadian Nursing, Third Canadian Edition, will be available with our **NEW** MyNursingLab!

In a recent survey of Nursing students at Nova Scotia Community College, **87% of students** said Kozier et al helped them understand tough topics (like the Canada Health Act) better.

**20 out of 23 students would recommend this text to their professor.**

This textbook helped by having a layout that was easily read even with all the information it had.

– Roxanne G. Nickerson

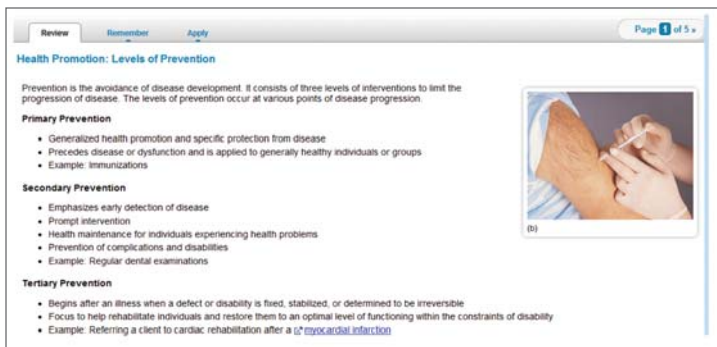

It is so much easier to read and understand and it doesn't have a "wordy" nature. It includes what we need to know and no more.

– Eleanor Jones, Nursing Student at NSCC

**The NEW MyNursingLab prepares students for your classroom and the NEW licensing exam!**

MyNursingLab's pre and post test quizzes with NCLEX-style questions lets students test themselves on their understanding of key concepts and skills. Based on a student's results on the pre-test, MyNursingLab creates a personalized and guided learning path that helps the student move beyond recall to comprehension.

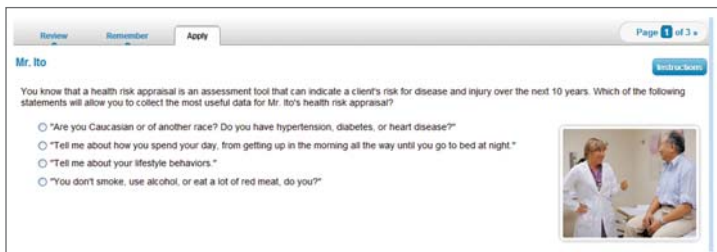

## Review:

MyNursingLab's guided learning path begins by helping students review – by providing students with content review summaries, helpful charts, animations and even videos that summarize key content that the student needs to review.

## Remember:

The personalized study plan then helps students remember what they have learned through the use of interactive activities and exercises. This helps students remember the key concepts that they may have struggled with in the pre test.

## Apply:

MyNursingLab's personalized study plan includes application activities like patient-care scenarios that help students strengthen clinical competency by providing them with a clinical scenario to actually apply what they have just learned.

## NEW Features:

- A text-agnostic MyNursingLab with pre and post test questions written in NCLEX-like language (and by NCLEX item writers).
- New, simpler folder navigation makes content easier to locate and access for both instructors and students.
- MyNursingLab content is created around the core competencies established by the Canadian Nursing Association.
- An interactive eText is available and can be accessed both online and via iPad/iPhone!

Also available from Pearson:

## The Canadian Neighbourhood created by Jean Giddens

The Canadian Neighbourhood contains video, text, photos, sample medical records, and community data. It can be used as a course-specific supplement with any Pearson nursing textbook or it can be used across the entire department for deeper cross-curricular integration.
